

MAXie Desktop & Mobile Application Report

Project: MAXie AI Desktop Pet & Mobile Companion

Author: Raj

1. Overview

MAXie is an AI-powered virtual companion designed to improve productivity, provide entertainment, and offer a personalized desktop/mobile experience. The project exists in two editions: a Windows Desktop application built using Electron and a Mobile application packaged using Capacitor for Android.

2. Desktop Version

Features:

- Animated desktop pet with idle, dance, sleep and feed animations.
- Reacts to apps like VS Code, YouTube, Spotify, Discord and Steam.
- Friendship, XP and gift system.
- Local personality and greetings.
- Context menus and lightweight Electron architecture.

Technology: Electron, HTML, CSS, JavaScript, Node.js.

3. Mobile Version

The Android version extends the MAXie experience to smartphones using Capacitor. It provides responsive UI, offline support, mobile-friendly interactions, and future support for AI chat, reminders, notifications, voice interaction and cloud synchronization.

4. Architecture

Frontend: HTML/CSS/JavaScript

Desktop Runtime: Electron

Mobile Runtime: Capacitor + Android Studio

Future Backend: Firebase / AI APIs

5. Future Roadmap

- Voice assistant
- AI memory across devices
- Cloud sync
- Plugin marketplace
- Emotion recognition
- Gamification achievements

6. Conclusion

MAXie aims to become a cross-platform AI companion that combines productivity, personalization and entertainment across desktop and mobile devices.
